

## Combining Keynote Presentations into One Project

Each continent will have ONE combined project for the Lobby Screens. Grade levels or individual teachers can create their own Keynote presentation, and then put them all together into one presentation for the Lobby Screens.

1. Create, edit, and save the individual presentations. You can each choose different themes if you wish. Save each with a different name.
2. Copy all the presentations to one location. One person should be the Continent Team Coordinator who will put them all into one presentation.
3. Open the presentation that will go first in the combined project.
4. Open the second one and overlap them a bit:

5. Close project two, but leave the first one open.
6. Open project three and drag each slide over to the first project. Continue with each project until all the slides are copied to the first project, creating one combined project.
7. Save the finished combined project with the continent name.
8. Export the finished project as a Quicktime movie. (See directions.)
